Our Commitment to Net Zero and Sustainable Operations

We are committed to continuously reducing our environmental footprint and have set a clear ambition to achieve net zero carbon emissions by 2040. This commitment guides the way we operate and the solutions we deliver, from developing decarbonisation pathways to providing sustainable design consultancy that supports clients in transitioning towards lower-carbon, more resilient built environments.

Sustainability is integrated into both our advisory approach and our workplace decisions, ensuring that environmental responsibility is reflected not only in what we advocate, but also in what we practise.

As part of this journey, we have relocated to Corporate Tower 9 at Pavilion Damansara Heights, a development designed with strong emphasis on sustainability, energy efficiency, and green building principles. This move reflects our intention to align our operational footprint with our ESG commitments and to work within an environment that supports more sustainable ways of working.

Through these efforts, we continue to support the broader transition towards a low-carbon future by combining practical action, advisory expertise, and responsible workplace choices.

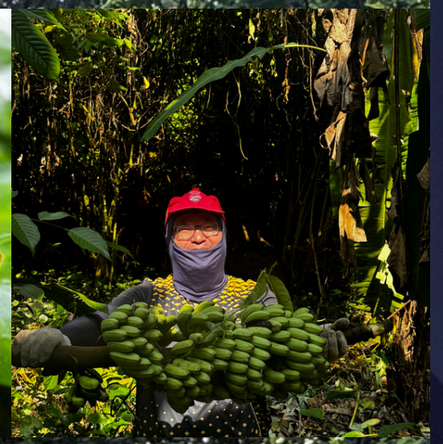

Site Prepping & Tree Planting

25th April 2026 | Bukit Kiara

In commemoration of Earth Day 2026, Savillians came together to support environmental conservation by volunteering with a local NGO, Friends of Bukit Kiara.

The initiative focused on site preparation and tree planting, contributing directly to the preservation and restoration of local green spaces. Through this hands-on volunteering effort, our employees actively supported environmental sustainability while strengthening our connection with the local community.

This initiative reflects Savills Malaysia's ongoing commitment to community engagement, environmental stewardship, and meaningful ESG action beyond the workplace.

Savills River Clean-Up Drive

21st June 2025 | Taman Melawati River

In conjunction with World Environment Day, Savillians partnered with Alliance River Three (ART!) for a meaningful day of environmental action at Taman Melawati River Three SDG Park.

Once a degraded river area, the site is now undergoing conservation and rehabilitation as part of an ongoing urban river restoration initiative. Going beyond river clean-up activities, our teams participated in hands-on eco efforts, including planting flowers to support vital pollinators such as bees, butterflies, and insects.

This initiative highlights our understanding that healthy rivers depend on thriving ecosystems, clean water, biodiversity, and resilient green corridors, reflecting Savills Malaysia's commitment to environmental stewardship and sustainable community impact.
